

MD. Kaium Hasan

Fullstack Developer

mdkaiumhasan2005@gmail.com +8801560014339 | Dhaka,Bangladesh (Open to Remote) | github.com/mdkaiumhasan

SUMMARY

FullStack developer with 2 years of hands-on experience building production React, Next.js, and TypeScript applications across food-delivery, child-safety, and content-automation platforms. Comfortable owning a feature end to end - states, edge cases, and performance, not just the happy path - while pairing REST/GraphQL data layers with clean, accessible UI. Works daily with AI-assisted tooling (Claude, Cursor, Antigravity, MCP) to build faster without cutting corners, and enjoys pushing past the first solution that works to find the right one. Based in Bangladesh and comfortable with async, distributed remote collaboration.

TECHNICAL SKILLS

Languages & Frameworks: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

APIs & Data: REST, GraphQL

CI/CD & Tooling: GitHub Actions, Git, Vercel / Render, Supabase

AI-Assisted Development: Claude, Cursor, Antigravity, MCP, structured prompt engineering

Also comfortable with: Kotlin & Jetpack Compose (Android), Python / FastAPI, Node.js / NestJS

PROJECTS & EXPERIENCE - INDEPENDENT DEVELOPER

GravityEats : Multi-Platform Enterprise Food Delivery System (Bangladesh)

2025 – Present

- Built an enterprise multi-platform food delivery ecosystem using NestJS, Kotlin (Android Multi-Module), and Next.js 16, powering real-time workflows across Customer, Rider, Merchant, and Admin roles.
- Engineered an audited financial ledger & COD cash reconciliation system with TypeORM pessimistic locking and idempotent transactions, eliminating fraud and preventing double payout risks.
- Architected a native Kotlin Android platform (:app-customer, :app-rider, :app-merchant, :shared) using Jetpack Compose, Hilt, Room, and WorkManager with Mapbox turn-by-turn navigation and offline-first data sync.
- Developed real-time order dispatch & telemetry pipelines leveraging Apache Kafka event streaming, WebSockets, and OneSignal push notifications - integrated with a custom HMAC-signed mobile crash triage inbox.
- Containerized and deployed microservices on Kubernetes with KEDA autoscaling, Prometheus/Sentry monitoring, and high unit/integration test coverage using Jest and Android testing tooling.

Parentra : Real-Time Parental Control & Child Safety Suite

2026 – Present

- Developed dual native Android apps (Kotlin) and a React dashboard with a Go/Fiber & PostgreSQL backend supporting multi-device real-time sync.
- Implemented live WebRTC camera/audio streaming (LiveKit) and real-time WebSocket events for instant location tracking and geofence alerts.
- Enforced strict device security via Android Device Admin policy, anti-uninstall PIN enforcement, and background permission health monitoring.
- Built rich cross-platform chat supporting media uploads, dynamic emoji reactions, Cloudinary media storage, and Glide disk caching.

Cradle & Care : Headless E-Commerce Platform

2026

- Built a Headless E-Commerce Platform using Next.js 15, MedusaJS, PostgreSQL, and Redis with a 9.0/10 production-readiness audit rating.
- Designed a custom FEFO inventory module with PostgreSQL row-level locking (SELECT FOR UPDATE) to prevent overselling and track perishable product batches.
- Implemented enterprise security & performance features including Meilisearch instant search (<250ms), Redis rate-limiting (6 zones), per-request CSP nonces, and 236 RBAC access control policies.

EasyMess : Automated Bachelor Mess & Expense Tracker

2026

- Developed a native Android app using Kotlin & Jetpack Compose with Material 3 UI components, delivering a dynamic, reactive application for hostel expense management.
- Built an automated financial & meal-rate engine powered by Cloud Firestore, computing live meal rates (Total Expense / Total Meals), member deposits, and individual balances in real time.
- Designed a role-based access framework (Manager vs. Member) featuring instant mess onboarding via unique Bind Codes and an interactive Bazar Request approval workflow.
- Shipped a dynamic dual-language localization system (Bangla & English) alongside interactive monthly calendar views, dark/light themes, and real-time group chat.

ADDITIONAL PROJECTS

Waypoint Challenge : IEP MCP Server

2026

- Built a Model Context Protocol (MCP) server in TypeScript that helps special education teachers generate IEP-grounded lesson modifications, reducing lesson planning time from hours to minutes.
- Designed a disability profile knowledge base covering 9 categories with a comorbidity resolver that detects and resolves conflicts between multiple diagnoses - addressing a gap present in all existing tools.
- Enforced the legal distinction between accommodations and modifications (IDEA compliance), with every suggestion citing its exact IEP source (ACC-1, MOD-2).
- Shipped 17 tools including progress tracking, parent report generation, SMART goal recommendations, and differentiated lesson material generation - with SQLite persistence and 24 passing tests.
- Selected from open challenge on Hacker News; received direct interview invitation from Waypoint Founder & CEO.

EDUCATION

Diploma in CST, Mymensingh Polytechnic Inst. — 2026

ADDITIONAL INFORMATION

Languages: Bengali (native), English (Basic)

Work style: Remote-first, async-friendly, comfortable across time zones
